Footnote arrangement in the column document

This is an example of footnote in the multi columns document. With axf:footnote-position, you can specify whether the display position of a footnote inserted at the lower part of a page per each block or span all. No settings are made in the first page. In this case, a footnote is positioned with span all.

AH Formatter is a most powerful formatting and printing software [1] using XSL-FO and XML/HTML with CSS. [2]

The second page shows an example of arranging the footnotes under each column by specifying axf:footnote-position="column"

AH Formatter is a a most powerful formatting and printing software [1] using XSL-FO and XML/HTML with CSS. [2]

This software conforms to XSL 1.1, [3] which is a specification for displaying / printing XML documents in a fine manner. Also it supports the page formatting with the layout setting by the CSS Level 3 specification which is currently under formulation in the CSS Working Group.
