

Footnote

Footnotes can be placed within a CSS similar to a FO document. A footnote is placed at the bottom of a page separated from the body text and is often separated by a border-line. A separation region can be placed between the body region and the footnote region by use of a user-defined class such as: `span.footnote{-ah-float: footnote;}` and an "@-rule" such as: `@footnote{border-top: solid; -ah-float: page bottom;}` both placed within the `<style>` tag.

Antenna House Formatter is a most powerful formatting and printing software¹ using XSL-FO and XML/HTML with CSS.²

This software conforms to XSL 1.1,³ which is a specification for displaying / printing XML documents in a fine manner. Also it supports the page formatting with the layout setting by the CSS Level 3 specification which is currently under formulation in the CSS Working Group.

¹ Depending on the formatting capability, Antenna House Formatter (formatting using XSL-FO and CSS) and Antenna House CSS Formatter (formatting using CSS) are available.

² XSL-FO and CSS cannot be mixed.

³ See also [XSL-FO Conformance] in the online manual.
