

# Format

The format property is used to convert formatter-generated numbers like page numbers to different counting methods. Antenna House Formatter has extended this property to include many numbering systems and number formats. The format property is applied to a page sequence and this document is set to start on page 13 for demonstration purposes.

```
format="1" (default) page number
```

format="௧" (Tamil) page number

format="I" (Roman) page number

format="Ⓐ" (Circled Latin Capital) page number
