# Generating wavy borders

The border of `border-style: wave;` can be specified like `-ah-border-wave-form: 10 3pt;`. One or two values may be specified. The values in order from left to right are wave form length and line width. Each value may be a number, a length, or 'auto'. Numeric values are proportional to the border width. If a value is 'auto' or omitted, it is regarded as either 6 or 0.125, respectively. Negative values are not available. `border-style: wave;` is available in AH Formatter V6.3 and later.

```
border-style: wave;
```

```
border-style: wave; -ah-border-wave-form: auto;
```

```
border-style: wave; -ah-border-wave-form: 6 0.125;
```

```
border-style: wave; -ah-border-wave-form: 2;
```

```
border-style: wave; -ah-border-wave-form: 5;
```

```
border-style: wave; -ah-border-wave-form: 10;
```

```
border-style: wave; -ah-border-wave-form: 10 3pt;
```

```
border-style: wave; -ah-border-wave-form: 10 5pt;
```
