

Content of a table cell split by a page break

The content of a cell that is being split by a page break can be specified using '[axf:table-cell-repeated-marker](#)'. When `axf:repeat-cell-content-at-break="true"` is specified to a cell and '[axf:table-cell-repeated-marker](#)' is also included in the cell, the content specified by '[axf:table-cell-repeated-marker](#)' replaces the copied cell content. In this example, "(Continued)" is added to the repeated content.

'axf:repeat-cell-content-at-break' is 'false' or is unspecified
