

In Antenna House Formatter [<fo:change-bar-begin/>](#) can have an <fo:float> child which allows for notes and other arbitrary information to be added to each change.

```
<fo:change-bar-begin change-bar-class="abc">
<fo:float float="start">
<fo:block-container width="2.5em" background-color="lightpink">
<fo:block font-size="8pt">This is a change log.</fo:block>
</fo:block-container>
</fo:float>
</fo:change-bar-begin>
```

This text has no changes so there is no change bar. This text has no changes so there is no change bar.
This text has no changes so there is no change bar. This text has no changes so there is no change bar.
This text has no changes so there is no change bar. This text has no changes so there is no change bar.
This text has no changes so there is no change bar.

This text has changes so there is a change bar without a note. This text has changes so there is a change bar without a note. This text has changes so there is a change bar without a note. This text has changes so there is a change bar without a note.
This text has changes so there is a change bar without a note. This text has changes so there is a change bar without a note.

In standard XSL 1.1 the [<fo:change-bar-begin/>](#) element does not have any children.

This is a
change
log.
