

## Border extension for rounded corners

As a type of border, a radius border can be drawn by using `-ah-border-radius:`. Specify such as `-ah-border-radius: 15pt 10pt;`, then the default value will be set as a horizontal diameter (vertical diameter when `-ah-writing-mode: vertical-rl;`). The second value is the other diameter. If omitted, it will be regarded as a default value, and it cannot be rounded if either diameter is less than zero.

Here is an example without specification

Here is an example of a block with `-ah-border-radius: 15pt 10pt;`

Here is an example of a block with `-ah-border-radius: 25pt 25pt;`

Here is an example of a block with `-ah-border-radius: 50% 50%;`
