Text Shadow

A text shadow can be specified with `text-shadow`. Specifying the value as `text-shadow: 10px 10px 10px darkgray`, values are interpreted in the following order: horizontal offset of the shadow, vertical offset of the shadow, blur radius of the shadow, and shadow color. The blur radius of the shadow must be a non-negative value, and if the blur radius is 0 or is omitted, the shadow's edge is sharp. For information on text shadow, see also Text Shadow" in the Online Manual. Text shadow blurring is available in AH Formatter V6.4.

`text-shadow: 8px 5px 0px green`

Antenna House

`text-shadow: 8px 5px 3px green`

Antenna House

`text-shadow: 8px 5px 6px green`

Antenna House

When an offset of the shadow is a negative value, the shadow is offset in the opposite direction. Multiple values can be specified to add additional shadows.
