

## 6. Internal link of Multiple PDF

---

An internal link in compound PDF is automatically allocated in the link to division PDF. For instance, `fo:basic-link` is used for the item on the TOC page in this sample as follows.

```
<fo:block text-align-last="justify" margin-left="0em" space-before="5pt" font-size="1em"
font-weight="700">
  <fo:basic-link internal-destination="IDABG40B">Foreword</fo:basic-link>
  <fo:leader leader-pattern="dots"/>
  <fo:page-number-citation ref-id="IDABG40B"/>
</fo:block>
```

If you click the item of TOC, it is possible to jump to the divided PDF page. Please try this FO with XSLFormatter V3.2!!
