

Line grid

By specifying `axf:baseline-grid`, a baseline grid can be set to make a baseline of each column fixed even when there is a heading or figures in the line. A new baseline grid can be specified with `axf:baseline-grid="new"`. The settings of font and line-height of this element are used for the baseline grid. By specifying `root`, the settings of font and line-height of the root element are used for the baseline grid. On the other hand, by specifying `none`, the baseline grid setting is disabled. How a block other than a line, such as a header and a figure, is placed in the baseline grid can be specified with `axf:baseline-block-snap`. In this sample, the default value “auto border-box” is used for the setting. This is the same as specifying `before` for the beginning of the column, `after` for the end of the column, and `center` for the others; however, `before`, `after` and `center` can be specified separately.

When `axf:baseline-grid` is specified

In this block, a line grid is specified with `axf:baseline-grid="new"`.

Heading
