

# Thickness of double-border lines

The line thickness of border-style="double" can be specified by using axf:border-double-thickness. For instance, the thickness can be specified like axf:border-double-thickness="1pt 1pt 1pt". The three values in order from left to right are: outside line width, spacing and inside line width. If a value is omitted, it is regarded as equivalent to the preceding value. Negative values are not available. Borders with double lines is available in AH Formatter V6.3.

```
border-style="double"
```

```
border-style="double" axf:border-double-thickness="1"
```

```
border-style="double" axf:border-double-thickness="3pt"
```

```
border-style="double" axf:border-double-thickness="3pt 3pt 3pt"
```

```
border-style="double" axf:border-double-thickness="3pt 1pt 1pt"
```

```
border-style="double" axf:border-double-thickness="1pt 1pt 3pt"
```

```
border-style="double" axf:border-double-thickness="1pt 3pt 1pt"
```
