

# Character string substitution

Character string is substituted by using `axf:text-replace`. Character strings are designated as a pair. The first character string of a pair is replaced entirely with the latter character string. When you want to substitute the character strings including a space such as 'Antenna House', please enclose them with single quotation marks.

Original character string

sample. 1999-2008, sample. sample. Antenna House, sample. sample. Antenna House, sample.
