

Setting an image to the background page

It's possible to apply a background image by specifying `background-image` to `fo:simple-page-master`. There are a lot of properties for `background-image`. In the first page, `background-position-horizontal="center"`, `background-position-vertical="center"` and `background-repeat="no-repeat"` are specified. A background image is placed only one in the center of the page.

In this page, an image expands to the entire page by specifying background-repeat="repeat".
