Background image origin
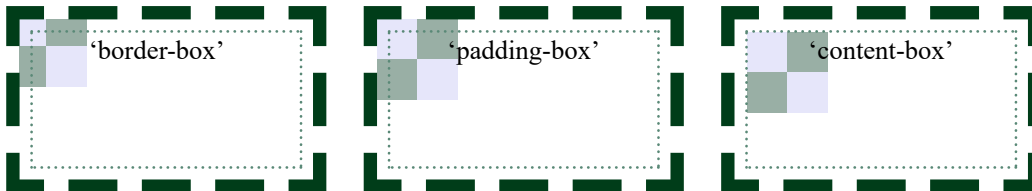

axf:background-origin specifies the area within which the background image is positioned. The allowed values correspond to the three parts of the CSS box model: 'border-box', 'padding-box', and 'content-box'. The default is 'padding-box'. 'background-position' specifies the position of the image within the box, where '0% 0%' (which is also '0 0') is at the top-left of the positioning area and '100% 100%' is at the bottom-right of the positioning area. 'axf:background-origin' does not affect either clipping of the image or repetitions of the image: axf:background-clip specifies the area to which the background image is clipped, and 'background-repeat' specifies whether and how to repeat the image. 'axf:background-origin' is available with AH Formatter V6.6 or later.

In the following examples, the inner, dotted border indicates the extent of the content box of the outer block, and the text indicates the 'axf:background-origin' value. All background images are the same size.
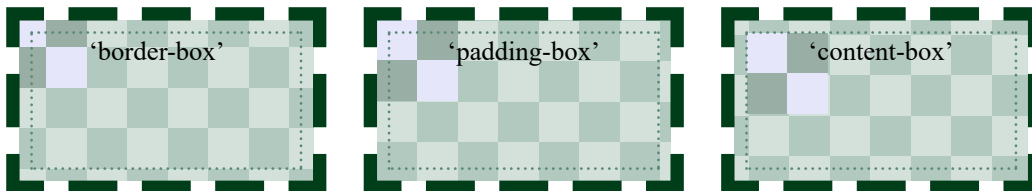

The examples use these images for repeated and non-repeated backgrounds, respectively: and .

Single, non-repeated background image at '0% 0%'

Non-repeated and repeated background images at '0% 0%'

Single, non-repeated background image at '100% 100%'

Non-repeated and repeated background images at '100% 100%'
