Specify the border to the region

In XSL-FO Specification, the width of 'padding' and 'border' specified for <fo:region-xxx> should be 0. Antenna House Formatter supports the values other than 0 of these properties.

```
<fo:region-before extent="40pt" border-style="solid" border-width="medium"/>
<fo:region-after extent="40pt" border-style="dotted" border-width="medium"/>
<fo:region-start extent="40pt" border-style="solid" border-width="thin"
reference-orientation="270"/>
<fo:region-end extent="40pt" border-style="solid" border-width="thin"
reference-orientation="270"/>
<fo:region-body margin-top="56pt" margin-left="50pt" margin-right="50pt"
margin-bottom="56pt" border-style="dashed" border-width="thin"/>
```

Each region can have the border of some styles and the thickness like this example.
