Antenna House CSS Sample Template

It's possible to specify the writing direction in both user-defined classes or in-line using the <span> tag. Specify `writing-mode: vertical-rl;` to make it vertical. Specify the orientation using the `transform: rotate(90deg);` in the unit of 90 degrees to rotate text. But even if 'writing-mode' and 'reference-orientation' are specified, if you don't make it right, it will not be effective.

This is the position of region-start.

This is the position of region-end.

The region start and end of this page is made in vertical mode by specifying `writing-mode: vertical-lr`
