Rich Media Annotations

By specifying axf:multimedia-treatment="richmedia", you can embed multimedia data in your PDF as "Rich Media" annotations. For example: <fo:external-graphic src="video.mp4" contenttype="video/mp4" axf:multimedia-treatment="richmedia">. If axf:multimedia-treatment="richmedia-windowed" is specified, the content will be displayed and played in a separate window. Rich media annotations do not require external players for playback. Supported data formats and valid properties differ from when multimedia is embedded using axf:multimedia-treatment="auto". For further information on 'axf:multimedia-treatment', please refer to the Online Manual. Rich media annotations are available with AH Formatter V6.5. This feature is supported only with PDF1.7 or later.

axf:multimedia-treatment="richmedia"

axf:multimedia-treatment="richmedia-windowed"

axf:media-skin-control="all", axf:media-skin-color="red", axf:media-skin-auto-hide="false"

You can specify axf:media-skin-control, axf:media-skin-color, and axf:media-skin-auto-hide to set the appearance of the skin with the controls to play and stop the rich media.

axf:media-activation

axf:media-activation specifies when to enable or disable rich media. For details on allowed values, please refer to 'axf:media-activation' in the Online Manual. The following sample combines PageOpen (activates when the page content containing the content is opened) and PageClose (deactivates when the page containing the content is closed).

axf:media-activation="PageOpen PageClose"
