

Positioning a float to the anchor point

By specifying `axf:float-y="anchor"`, the float in the vertical direction (horizontal in vertical writing) can be placed at the anchor point. The setting of `axf:float-y="anchor"` is available from AH Formatter V7.2.

By specifying `axf:float-y="anchor"`, floats that span multiple columns can be placed at any anchor points with `axf:float-reference="page"` and `"multicol"`. In addition, the text wraps around the float even if it is not in the specified column.

In AH Formatter V7.1 or earlier, the text and float may overlap as shown in the sample below under the conditions of [Restrictions](#). By specifying `axf:float-y="anchor"`, you can flexibly deal with such cases.

<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt. anchor point</p> <p style="text-align: center;">Float-1</p> <p>Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum. Lorem ipsum dolor sit amet, consectetur</p>	<p>adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.</p> <p>>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation.</p>	<p>Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.
