Specifying the character count and zone of the word to be hyphenated

The minimum character count (integral value of 1 or more) of the word to be hyphenated can be specified by `-ah-hyphenation-minimum-character-count`. The available range to be hyphenated can be controlled by `-ah-hyphenation-zone`. With `-ah-hyphenation-zone`, if the length from the end of a word to the end of line is less or equal to the specified value, the following word is not hyphenated. It is invalid when 0 or less value is specified.

No setting of `-ah-hyphenation-minimum-character-count`
