

Hanging punctuation at the start / end of line

Specifies whether the hanging punctuation at the start and end of a line is applied. If `axf:hanging-punctuation` is specified, hanging punctuation is not applied. If `start` is specified, hanging punctuation is applied at the start of a line. `text-align="right"` or `text-align="justify"` can be specified together with the `force-end` property, then the full-width punctuation comes at the end of a line, it is forced to be hanged. The other settings are explained in this sample. See also "[axf:hanging-punctuation](#)" in the online manual to learn more about the corresponding punctuations.

none

「あいうえ
お、

start

「あいうえお、

force-end

「あいうえお、

first

The same behavior as `start` is applied only at the first line of a paragraph.

「あいうえお」
「かきく

allow-end

When the target character to be hanged comes at the end of a line, it isn't hanged when fitting into a line, it is hanged when not fitting into a line.

あいうえお、
「かきくけこ、

last

The same behavior as `force-end` is applied only at the end line of a paragraph.
