

Embedding multi media in PDF

Multimedia data such as audio, video can be embedded in PDF. You can specify it as `<video src="video.mpg" type="video/mpeg">` or `<object data="video.mpg" type="video/mpeg">`. A poster picture can be specified to `-ah-poster-image`. You can show the player control bar by `-ah-show-controls`, the volume of the sound by `-ah-media-volume` and the number of times to play the multimedia by `-ah-media-play-mode`. Embedding of multi media data is available only with PDF1.5 or later.

Without the setting of `-ah-poster-image`

With the setting of `-ah-poster-image`

`-ah-show-controls="true", -ah-media-volume="10%", -ah-media-play-mode="2"`

The control bar is shown in the lower side of the multimedia under playing. An enough space is required under the multimedia element. Whether the setting of `-ah-show-control`, `-ah-media-volume`, `-ah-media-play-mode` may become effective or not depends on multimedia data, a viewer and a player.
