

PDF embedding by specifying pages

Antenna House Formatter can use the HTML `<img>` tag to embed a PDF like an image. By default, the first page of the PDF is embedded, but you can also embed a specified page. Use the format of `#page=<FirstPage>-<LastPage>` in the `src` attribute to embed a specific page, consecutive pages, or a page range specified. For more details, see [PDF Embedding](#) in the Manual.

The following table uses these pages from a four-page PDF file:  ,  ,  , and .

src="..."	Effect	Result (using)
embedded.pdf	First page only	
embedded.pdf#page=2	Specific page	
embedded.pdf#page=2-3	Page range	 
embedded.pdf#page=2-	From page until end	  
embedded.pdf#page=1-	All pages
