

Ruby alignment

With `'axf:ruby-align'`, you can specify the ruby alignment. Also you can specify the ruby alignment against its base character with `'axf:ruby-position'`, spacing between ruby and its base character with `'axf:ruby-offset'`, and whether to permit the use of a small kana as ruby for its base character with `'axf:ruby-small-kana'`.

'axf:ruby-align' (to specify ruby alignment)

Example of aligning ruby with 'start' (left-aligned), 'center' (centering) and 'end' (right-aligned) of its base character:

`ruby-align="start"`

ち
地

`ruby-align="center"`

ち
地

`ruby-align="end"`

ち
地

Example of aligning ruby with distribute-space (a white space is given before and after ruby) and with distribute-letter (no white space is given before and after ruby):

`ruby-align="distribute-space"`

あじさい
紫陽花

`ruby-align="distribute-letter"`

あじさい
紫陽花

axf:ruby-position (to specify the ruby alignment against its base character)

Example of aligning a ruby with 'before' (on the before side of its base character) and 'after' (on the after side of its base character):

`axf:ruby-position="before"` (Initial)

あじさい
紫陽花

`axf:ruby-position="after"`

紫陽花
あじさい

axf:ruby-offset (to specify spacing between ruby and a parent character)

Example of specifying spacing between ruby and a parent character with number (a value multiplied with font size of ruby), length (specified length) and percentage (a value multiplied with font size):

`axf:ruby axf:ruby-offset="0pt"` (Initial)

あじさい
紫陽花

`axf:ruby axf:ruby-offset="5pt"`

あじさい
紫陽花

axf:ruby-small-kana (to specify to permit the use of a small kana as ruby)

Example of specifying 'auto' (small letters are permitted) and 'convert' (small letters are converted to regular-sized letters):

`axf:ruby-small-kana="auto"` (Initial)

ちよつと
一寸

`axf:ruby-small-kana="convert"`

ちよつと
一寸
