

Thickness of double-border lines

The line thickness of `border-style: double;` can be specified by using `-ah-border-double-thickness`. For instance, the thickness can be specified like `-ah-border-double-thickness: 1pt 1pt 1pt`. The three values in order from left to right are: outside line width, spacing and inside line width. If a value is omitted, it is regarded as equivalent to the preceding value. Negative values are not available. Borders with double lines is available in AH Formatter V6.3 and later.

```
border-style: double;
```

```
border-style: double; -ah-border-double-thickness: 1;
```

```
border-style: double; -ah-border-double-thickness: 3pt;
```

```
border-style: double; -ah-border-double-thickness: 3pt 3pt 3pt;
```

```
border-style: double; -ah-border-double-thickness: 3pt 1pt 3pt;
```

```
border-style: double; -ah-border-double-thickness: 3pt 1pt 1pt;
```

```
border-style: double; -ah-border-double-thickness: 1pt 3pt 1pt;
```
