

Box shadow

Shadows can be added to a box using `axf:box-shadow`. For `axf:box-shadow="10px 10px 10px 10px darkgray"`, the values, in order, are: horizontal offset of the shadow; vertical offset of the shadow; blur radius; shadow expansion; shadow color. By adding `'inset'` to the value, an inner shadow can be created.

`axf:box-shadow="10px 10px 0px 0px darkgray"`

`axf:box-shadow="10px 10px 5px 0px darkgray"`

`axf:box-shadow="10px 10px 0px 8px darkgray"`

`axf:box-shadow="inset 10px 10px 0px 0px darkgray"`

`axf:box-shadow="-10px -10px darkgray"`

When an offset of the shadow is a negative value, the shadow appears in the region on the opposite side from when a positive value is specified.

`axf:box-shadow="10px 10px dimgray,20px 20px darkgray,30px 30px lightgrey"`

Several values can be specified in combination to add multiple shadows.
