

Side float

Here is an example of setting the side float by specifying `float="start"`, `float="end"`. The first 2 examples show that the text body is wrapping around the float. The latter 2 examples show that the text does not wrap around the float because `<fo:float>` is being arranged in the indent of left and right of the text body.

Side float `<fo:float float="start">`

Float area

`<fo:float>` is inserted at the head of the paragraph.
