

# Trimming Japanese full-width punctuation

If 'all' is specified, all parentheses, middle dots, and punctuations of full width are trimmed and treated as half width. <string> behaves the same as all, but only the character included in the character strings specified here is treated as a half width. See also 'axf:punctuation-trim' in the online manual for more character strings available.

'none'

(あいうえお)

'start'

(あいうえお)

'end'

(あいうえお)

'start-except-first' It's same as 'start', but punctuations in the first line or the line right after the forcible line break are excluded.

(あいうえ(お))

'allow-end' If the full-width punctuation comes at the end of a line and it fits in a line, it's kept as full-width, if it does not fit in a line, it's made half-width.

(あいうえおか)きくけこ

'end-except-fullstop' It is same as 'end', but U+3002 (。) and U+FF0E (.) are excluded.

(あいうえお)(かきくけこ。

'adjacent' Trim the amount of the space between the full-width punctuation and the full-width character. (e.g. full-width opening parenthesis) The combination of the adjacent character strings before and after the space can be found in 'ah-punctuation-trim' in the online manual 'ah-punctuation-trim: none;'

((あいう);かき)、けこ

'ah-punctuation-trim: adjacent' It is same as 'end', but U+3002 (。) and U+FF0E (.) are excluded.

((あいう);かき)、けこ

'all', <string> If 'all' is specified, all parentheses, middle dots, and punctuations of full width are trimmed and treated as half width. <string> behaves the same as all, but only the character included in the character strings specified here is treated as a half width. See also 'ah-punctuation-trim' in the online manual for more character strings available.

'ah-punctuation-trim: none;'

【あ(あ“あ:あく・)あ、あ”あ)あ】

'ah-punctuation-trim: all'

【あ(あ“あ:あく・)あ、あ”あ)あ】

'ah-punctuation-trim: > , , " , ) , ] '

【あ(あ“あ:あく・)あ、あ”あ)あ】
