

Display watermark on page

The 'watermark-text' attribute of `<formatter-settings>` in the option settings file specifies watermark text to be displayed on every page. The watermark color and font can also be specified. In Antenna House Formatter V7.3 or later, you can specify the string color, opacity, stroke color and width, rotation, and scale. For details, see 'watermark-text' in the online manual.

The watermark in this sample is specified as:

```
<formatter-config>
  <formatter-settings
    watermark-text="HELLO!"
    watermark-stroke-color="rgba(blue,0.5)"
    watermark-fill-color="rgba(purple,0.2)"
    watermark-stroke-width="0.0325"
    watermark-rotate="-45"
    watermark-scale="0.6" />
</formatter-config>
```
