Aligns the float on the start side of the dropped initial

By specifying 'axf:initial-letters-start-intrusion', if the anchor of the float is after the dropped initial and at the start line of the block, aligns the float on the start side of the dropped initial. This feature is available in Antenna House Formatter V7.4 or later.

axf:initial-letters-start-intrusion="none"

Aligns the float on the after side, avoiding the dropped initial.
