

Arranging a float in a column (placed outside the column)

By specifying `axf:float-x="column-outside"`, when the float is in the last column, it's considered that 'end' is specified, when the float area is in other columns, it's considered that 'start' is specified, when the float area is in non-column document, it's considered that 'start' is specified. The setting of `axf:float-x="column-outside"` is available from Antenna House Formatter V7.1.

Example of specifying `axf:float-x="column-outside"` for 2-column document
