

# Display the alternate text of an image

Using '[axf:display-alttext](#)', specifies whether to display the alternate text of an image. This feature is available in AH Formatter V7.0 or later.

The following specifications are commonly used in this sample.

`axf:alttext="this content shows up if the parent image is missing"`

`src="img/button-none.png"` is specified in `<fo:external-graphic>`, but this image does not exist.

`axf:display-alttext="true"`: The alternate text is displayed, the image is not displayed.

**this content shows up if the parent image is missing**

`axf:display-alttext="false"`: The alternate text is not displayed.

`axf:display-alttext="auto"`: The value specified by [display-alttext](#) in the Option Setting File is adopted.
