

Annotations in PDF document

You can create annotations in PDF by specifying '[axf:annotation-type](#)'. The types of annotations available are text annotation ('Text'), free-text annotation ('FreeText'), rubber-stamp annotation ('Stamp') and file-attachment annotation ('FileAttachment'). An author, title, content, display when the PDF is opened and icon of the respective annotations can be specified.

This sample specifies a title (`axf:annotation-title="Annotation"`), an author (`axf:annotation-author="Antenna House"`) and contents (`axf:annotation-contents="Sample"`).

axf:annotation-type="Text"

The display state can be specified to 'Text' when PDF is opened by '`axf:annotation-open`'. By specifying 'true', it is displayed.

axf:annotation-type="FreeText"

Font, font size, weight and color can be specified to 'FreeText'

Sample

axf:annotation-type="Stamp"

Any display styles can be specified to 'Stamp' by '`axf:annotation-icon-name`'. The following shows some of the examples.

`axf:annotation-icon-name="Draft"`

`axf:annotation-icon-name="ForPublicRelease"`

`axf:annotation-icon-name="TopSecret"`

axf:annotation-type="FileAttachment"

A reference file can be specified to 'FileAttachment' by '`axf:annotation-file-attachment`'.

Specify the data scheme for 'axf:annotation-file-attachment'

In addition to specifying a file name for 'axf:annotation-file-attachment', it is possible to specify data directly using the data scheme. In this case, an alternative file name must be specified in 'axf:annotation-file-name'.

This feature is available with Antenna House Formatter V7.3 MR1 or later.
