

Specifying the annotation creation and modification date.

You can specify the creation date and modification date of PDF annotations with '[axf:annotation-createdate](#)' and '[axf:annotation-modifydate](#)'. See [The date format](#) for the character strings that can be specified. This feature is available from AH Formatter V7.1.

'axf:annotation-createdate'

You can specify the creation date of the annotation. When omitted, it is considered the same value as 'axf:annotation-modifydate'.

'axf:annotation-modifydate'

You can specify the modification date of the annotation. If omitted, it is considered the value of 'modifydate' in [<axf:document-info>](#).

You can check the creation date and modification date in the annotation properties and the annotation list in the PDF viewer. Depending on the PDF viewer, only the modification date may be displayed, and the creation date may not be displayed.
