

# Document Information embedded into PDF

Document information such as an author and title can be embedded in the PDF. Antenna House Formatter generates document information automatically by adding the following extended elements. It's also possible to specify how to display PDF or hide the menu and tool bar. See also "[axf:document-info](#)" in the Online Manual. The information that is embedded into the PDF can be seen by Adobe Acrobat or Reader.

## Example

The `<axf:document-info>` extension element can be placed as a child of `<fo:declarations>` (or, for PDF output in multiple separate volumes, as the first child element of `<fo:page-sequence>`). Both the property name and property value are required. The value of 'name' must be one of the following:

```
<fo:root xmlns:fo="http://www.w3.org/1999/XSL/Format"
        xmlns:axf="http://www.antennahouse.com/names/XSL/Extensions">
...
<fo:declarations>
<axf:document-info name="document-title" value="The document title"/>
<axf:document-info name="subject" value="The document subject"/>
<axf:document-info name="author" value="The author"/>
<axf:document-info name="author-title" value="Title of, or some keywords about, the author"/>
<axf:document-info name="description-writer" value="The author of the document description"/>
<axf:document-info name="keywords" value="Comma-separated keywords list"/>
<axf:document-info name="copyright-status" value="Copyright status"/>
<axf:document-info name="copyright-notice" value="Copyright notice"/>
<axf:document-info name="copyright-info-url" value="URL of the copyright information"/>
<axf:document-info name="xmp" value="URL of XMP file to embed in the PDF"/>
<axf:document-info name="pagemode" value="How the document should be displayed when it is opened"/>
<axf:document-info name="pagelayout" value="Page layout when the document is opened"/>
<axf:document-info name="hidetoolbar" value="Whether to hide the tool bar when opening the document"/>
<axf:document-info name="hidemenubar" value="Whether to hide the menu bar when opening the document"/>
<axf:document-info name="hidewindowui" value="Whether to hide the user interface elements when opening the document"/>
<axf:document-info name="fitwindow" value="Whether to resize the document's window to fit the first displayed page"/>
<axf:document-info name="centerwindow" value="Whether to position the document's window in the center of the screen"/>
<axf:document-info name="displaydoctitle" value="Whether the window's title should display the document title"/>
<axf:document-info name="openaction" value="Destination to display or action to perform when document is opened"/>
<axf:document-info name="createdate" value="Date and time the document was created"/>
<axf:document-info name="modifydate" value="Date and time the document was most recently modified"/>
</fo:declarations>
...
```

- The 'createdate' and 'modifydate' values for 'name' are valid only with AH Formatter V6.6 MR5 and later.
- This sample specifies 'document-title', 'author', and 'keywords'.
- The information can be displayed in the [Document Information Dialog](#) in the Antenna House Formatter GUI.
