Specifying expansion text for tags in Tagged PDF

When you create a Tagged PDF for accessibility, you can use ['axf:expansion-text'](#) to specify expansion text that specifies descriptive text for abbreviations, etc. in the Tagged PDF. The setting of 'axf:expansion-text' is available from Antenna House Formatter V7.2.

In this sample, the expansion text is specified by 'axf:expansion-text' as shown below. When the text of a PDF document as a Tagged PDF output from Antenna House Formatter is read aloud by screen reading software, the expansion text is also read aloud along with the abbreviation.

```
<fo:block>
        <fo:inline axf:expansion-text="Cascading Style Sheets">CSS</fo:inline> is
        one of the specifications that indicates how to qualify HTML and XML
        elements.
</fo:block>
```

CSS is one of the specifications that indicates how to qualify HTML and XML elements.
