Creating a footnote number and specifying a default value

You can create and cite a footnote number by using 'axf:footnote-number' and 'axf:footnote-number-citation'. Generally, footnote number has its value calculated with a stylesheet in advance and fixed value is output to XSL-FO. However, using these properties, the value is determined when the document has been formatted. Also, you can change the footnote format by specifying 'axf:footnote-number-format' and change the initial value by specifying 'axf:footnote-number-initial' in <fo:page-sequence>.

Antenna House Formatter is a most powerful formatting and printing software [a] using XSL-FO and XML/HTML with CSS. [b]

This software conforms to XSL 1.1, [c] which is a specification for displaying / printing XML documents in a fine manner. Also it supports the page formatting with the layout setting by the CSS Level 3 specification which is currently under formulation in the CSS Working Group.

---

[a] Depending on the formatting capability, Antenna House Formatter (formatting using XSL-FO and CSS) and Antenna House CSS Formatter (formatting using CSS) are available.

[b] XSL-FO and CSS cannot be mixed.

[c] See also [XSL-FO Conformance] in the online manual.

> In this page, the default value and display format of the first page and footnote number are changed by specifying axf:footnote-number-format="*1", axf:footnote-number-initial="10" with a new <fo:page-sequence>.

Antenna House Formatter is a most powerful formatting and printing software[*10] using XSL-FO and XML/HTML with CSS. [*11]

This software conforms to XSL 1.1,[*12] which is a specification for displaying / printing XML documents in a fine manner. Also it supports the page formatting with the layout setting by the CSS Level 3 specification which is currently under formulation in the CSS Working Group.

[*10] Depending on the formatting capability, Antenna House Formatter (formatting using XSL-FO and CSS) and Antenna House CSS Formatter (formatting using CSS) are available.

[*11] XSL-FO and CSS cannot be mixed.

[*12] See also [XSL-FO Conformance] in the online manual.
