Page master for second page

With page-position="second", you can select a separate page master for the second page of a page sequence (the page after the page that matches 'first'). See 'page-position' in the the Online Manual for details. This feature is available with Antenna House Formatter V7.3 or later.

In this sample, the second page is set to select a page master with a background color of "beige".

```
<fo:page-sequence-master master-name="second">
  <fo:repeatable-page-master-alternatives>
    <fo:conditional-page-master-reference master-reference="master"
                                          page-position="first"/>
    <fo:conditional-page-master-reference master-reference="beige"
                                          page-position="second"/>
    <fo:conditional-page-master-reference master-reference="pink"
                                          page-position="rest"/>
  </fo:repeatable-page-master-alternatives>
</fo:page-sequence-master>
```

This is the second page.

By combining page-position="second" and odd-or-even="odd-document/even-document", the even or odd pages condition is added.

In this sample, a page master with a background color of "beige" is selected for a second page that is an odd-numbered page counting from the beginning of the document, and a page master with a background color of "pink" is selected for a second page that is an even-numbered page counting from the beginning of the document.

```
<fo:page-sequence-master master-name="second-odd-even">
  <fo:repeatable-page-master-alternatives>
    <fo:conditional-page-master-reference master-reference="master"
                                          page-position="first"/>
    <fo:conditional-page-master-reference master-reference="beige"
                                          page-position="second"
                                          odd-or-even="odd-document"/>
    <fo:conditional-page-master-reference master-reference="pink"
                                          page-position="second"
                                          odd-or-even="even-document"/>
  </fo:repeatable-page-master-alternatives>
</fo:page-sequence-master>
```

This is the second page.
