

# Change bar

Here is an example of displaying a change bar. From the position of `<fo:change-bar-begin>`, which indicates the start of a change bar named with 'change-bar-class', it will be drawn to the position of `<fo:change-bar-end>`, which shows the end of the same 'change-bar-class'. A change bar object can be positioned at anywhere below `<fo:flow>`. You can specify the position of a change bar object on the left/right, inside/outside of the block by 'change-bar-placement'. 'change-bar-color', 'change-bar-offset', 'change-bar-style', and 'change-bar-width' are properties of `<fo:change-bar-begin>` that specify the color, offset from the body, line style, and line width of the change bar, respectively.

A change bar starts at an `<fo:change-bar-begin>`, and ends at an `<fo:change-bar-end>`.

In order to make "end" match with "begin", class names are specified on `<fo:change-bar-begin>` and `<fo:change-bar-end>` using 'change-bar-class'.
