

Display watermark on page

The specified watermark text is displayed on each page according to the attribute value watermark-text in the option settings file <formatter-settings>. In addition to watermark text, color and font can be specified. In Antenna House Formatter V7.3 or later, you can specify the string color, opacity, stroke color and width, rotate, and scale. For details, see [watermark-text](#) in the online manual.

In this sample, watermark is specified as an optional setting as follows.

```
<formatter-config>  
<formatter-settings  
  watermark-text="HELLO!"  
  watermark-stroke-color="rgba(blue,0.5)"  
  watermark-fill-color="rgba(purple,0.2)"  
  watermark-stroke-width="0.0325"  
  watermark-rotate="-45"  
  watermark-scale="0.6" />  
</formatter-config>
```
